Top 10 Low-cost Steps You Can Take This Summer

1. Caulk and weatherstrip around windows and doors to stop air leaks. Seal any gaps in floors and walls around pipes and electrical wiring.

2. Change filters monthly. Install a “filter whistle” to let you know when to change them.

3. Replace incandescent bulbs with LED bulbs.

4. Repair air leaks and seal and insulate cooling system ductwork.

5. Add insulation to your attic, crawl space and any accessible exterior walls. Add pipe insulation to the first 5 feet of water pipe coming from your water heater. Install light switch and electrical outlet seals on exterior walls.

6. Install an ENERGY STAR® programmable thermostat appropriate for your type of heating system and set it at 78°F for cooling.

7. Look for the ENERGY STAR® label when replacing large or small appliances.

8. Wrap your water heater with insulation or install an insulating blanket.

10. Use power strips for home electronics, and turn off power strips when equipment is not in use. TVs and DVD players still use power when the switch is off.
